VIVA WELLNESS CO.

PEPTIDES | HORMONE OPTIMIZATION | WEIGHT LOSS

PRESENTED BY LILIANA DAMRON, APRN, FNP-BC

Precision Hormone & Peptide Therapy

eBook

A simple, honest guide to what peptides and hormones can do — and what to realistically expect from each.

MEET YOUR PROVIDER

Liliana Damron, APRN, FNP-BC

Board-Certified Family Nurse Practitioner
Founder & Provider, Viva Wellness Co.

Lili is a board-certified Family Nurse Practitioner with over 10 years of clinical experience. She began her career in critical care as a registered nurse within the St. David's HealthCare system in Austin, Texas.

She earned a Bachelor of Science in Nursing and a Bachelor of Business Administration from Tarleton State University, and holds a Master of Science in Nursing from Texas State University.

Her clinical foundation includes more than six years in geriatric care with Austin Geriatric Specialists — experience that led her to help adults optimize their health proactively, not just reactively.

WHO WE HELP

Athletes	High Performers	Parents & Busy Adults	Healthy Aging
Hit PRs, recover faster, optimize performance.	Sustained output for executives and demanding careers.	Healthy weight, body comp, and energy.	Proactive care today for 20+ years from now.

"A healthy you — today and 20 years from now."

WHAT'S INSIDE

Contents

01
Hormone Optimization
TRT · Estradiol · Progesterone · Female Testosterone

02
Growth & Recovery
Sermorelin · CJC-1295/Ipamorelin · Tesamorelin

03
Weight & Metabolic
Semaglutide · Tirzepatide · Retatrutide

04
Regenerative Support
BPC-157 · TB-500 · GHK-Cu · KPV

05
Energy & Longevity
NAD+ · Glutathione · Epithalon · MOTS-c · Semax · Selank

06
Performance & Recomp
SLU-PP-332 · MOTS-c · CJC-1295 · HRT/TRT

07
Sexual Wellness
Tadalafil · Sildenafil · PT-141 · TRT · Addyi

08
Skin & Hair
Compounded Topicals · Hair Growth Foam

BEFORE YOU READ

A Note

This guide is a plain-language summary — not a prescription. Every therapy inside requires a conversation with a provider, an honest look at your labs, and a plan that fits you.

- No therapy should be started without provider evaluation.
- Some compounds are FDA-approved. Some are not. Both are noted clearly.
- Some therapies are used off-label — this is a legal, common medical practice.
- Results vary. No outcome is guaranteed.
- Read this before your consultation. We'll get more done together.

01

CHAPTER

Hormone Optimization

Both men and women experience age-related hormone decline. Treatment is sex-specific, lab-guided, and individualized.

FOR MEN

Therapy	What It Does
Testosterone Injection	The most common delivery method. Precise, consistent dosing under provider guidance. Administered subcutaneously or intramuscularly, typically weekly or twice weekly.
Testosterone Transdermal Gel	Daily topical application providing steady hormone levels throughout the day. A practical alternative for patients who prefer to avoid injections.
Testosterone Cream	Compounded topical cream applied daily. Customizable concentration and absorption. A well-tolerated option alongside gel and injection.

Associated with lean mass improvement, strength gains, improved sexual function, and better energy in appropriately selected patients. (Snyder et al., 2016; Bhasin et al., 2018)

FOR WOMEN

Hormone	What It Does
Estrogen	Supports bone health, cardiovascular function, thermoregulation, and cognitive stability. Reduces hot flashes and night sweats.
Progesterone	Protects endometrial tissue, supports sleep and mood. Prescribed with estrogen in women with an intact uterus.
Testosterone (Female Dose)	Supports muscle tone, motivation, sexual desire, and vitality when labs confirm deficiency.

02

CHAPTER

Growth & Recovery

Growth hormone secretagogues stimulate your body's own GH production — supporting fat loss, muscle preservation, deeper sleep, and recovery.

Peptide	What It Does
Sermorelin	Stimulates natural growth hormone release. Supports fat metabolism, muscle preservation, and sleep quality. Gentle, gradual results.
CJC-1295 / Ipamorelin	Dual-pathway growth hormone stack. Supports fat loss, muscle gain, deeper sleep, and recovery. One of our most requested protocols.
Tesamorelin	Clinically proven to reduce visceral (belly) fat. Effective for body recomposition, often paired with GLP-1 protocols.

WHAT TO EXPECT

- Sleep improvements within 2–4 weeks
- Energy and recovery improvements over 4–8 weeks
- Visible body composition changes over 3–6 months
- Consistent use with good nutrition and training required

03 CHAPTER Weight & Metabolic

Obesity is not a willpower problem — it's a hormonal one. GLP-1 and related incretin therapies target that biology directly, with the strongest weight-loss evidence in modern medicine.

~15%	~21%	~24%
Semaglutide avg. weight loss	Tirzepatide avg. weight loss	Retatrutide avg. weight loss

Wilding et al., NEJM 2021 · Jastreboff et al., NEJM 2022 & 2023. Results reflect specific trial populations.

Therapy	What It Does
Semaglutide	GLP-1 agonist. Reduces appetite, slows digestion, improves blood sugar. FDA-approved (Wegovy, Ozempic).
Tirzepatide	Dual GLP-1 + GIP agonist. Stronger appetite and metabolic effect than GLP-1 alone. FDA-approved (Zepbound, Mounjaro).
Retatrutide	Triple agonist adding glucagon signaling for increased calorie burn. Highest trial weight-loss to date. Investigational.
Tesamorelin	Growth hormone peptide targeting visceral fat. Often combined with GLP-1 for enhanced results.

04 CHAPTER Regenerative Support

These peptides support tissue repair, reduce inflammation, and accelerate recovery from injury, surgery, and chronic musculoskeletal wear.

Peptide	What It Does
BPC-157	Supports tendon, ligament, and gut lining repair. Reduces inflammation. Available injection or oral.
TB-500	Promotes cell migration to injury sites. Supports connective tissue recovery and reduced scarring.
GHK-Cu	Copper peptide. Stimulates collagen, supports wound healing, skin elasticity, and hair follicle health.
KPV	Potent anti-inflammatory peptide. Supports gut and skin inflammation. Available injection or oral.

OUR MOST REQUESTED RECOVERY STACK

BPC-157 + TB-500

Two peptides targeting complementary healing pathways — frequently combined for athletes, post-surgical patients, and anyone managing chronic pain or inflammation.

05 CHAPTER

Energy & Longevity

Cellular energy and the biology of aging — supporting mitochondrial function, detoxification, cognitive performance, and long-term vitality.

Therapy	What It Does
NAD+	Master cellular coenzyme. Supports energy production, DNA repair, mitochondrial function. Declines ~50% by age 70.
Glutathione	Master antioxidant. Supports liver detoxification, immune function, skin brightness. Injection and sublingual.
Epithalon	Studied for telomere support, circadian rhythm, and sleep architecture.
MOTS-c	Mitochondrial peptide. Activates AMPK, supports fat oxidation and endurance capacity.
Semax	Intranasal cognitive peptide. Influences BDNF and dopamine pathways. Supports focus and clarity.
Selank	Intranasal anxiolytic peptide. Modulates GABA pathways. Supports stress resilience without sedation.

CHAPTER

06 Performance & Recomposition

For athletes, active adults, and high performers — protocols built around measurable output, body composition, and recovery capacity.

Therapy	What It Does
SLU-PP-332	ERR-alpha agonist. Activates mitochondrial pathways for endurance and fat oxidation. Investigational.
MOTS-c	Mitochondrial peptide. Enhances metabolic efficiency and exercise capacity. Pairs with SLU-PP-332.
CJC-1295 / Ipamorelin	Cornerstone body recomposition stack. Supports muscle gain, fat loss, and recovery.
HRT / TRT	Hormone optimization is often the single most impactful change high performers can make.

OUR PERFORMANCE PHILOSOPHY

"Hormone foundation first. Mitochondrial support second. Training and nutrition always."

07 CHAPTER Sexual Wellness

Sexual health is medical — not lifestyle. All protocols are provider-managed and confidential.

FOR MEN

Therapy	What It Does
Tadalafil	Cialis. PDE5 inhibitor. Daily low-dose or on-demand. FDA-approved for erectile dysfunction.
Sildenafil	Viagra. PDE5 inhibitor. On-demand only. The most studied ED medication. FDA-approved.

FOR WOMEN

Therapy	What It Does
Addyi (Flibanserin)	First FDA-approved medication for premenopausal HSDD. Daily bedtime dosing. Not for use with alcohol.
Testosterone (Female Dose)	Low T in women is linked to reduced desire and satisfaction. Evaluated as part of HRT assessment.

FOR BOTH

Therapy	What It Does
PT-141	Works centrally on desire and arousal — independent of hormones. Effective for men and women.
TRT / HRT	The hormonal foundation of sexual health for both sexes. Often the highest-impact intervention.

08 CHAPTER Skin & Hair

Compounded topical formulations prepared by licensed pharmacies — customized to your skin type, concerns, and provider-guided protocol.

COMPOUNDED SKIN INGREDIENTS

Ingredient	What It Does
Tretinoin	Vitamin A derivative. The gold standard for collagen induction and photoaging reversal.
GHK-Cu	Copper peptide. Stimulates collagen and elastin. Supports wound healing and fine line reduction.
NAD+	Supports mitochondrial function at skin level. Improves tone and barrier recovery.
Estriol	Bioidentical estrogen. Skin elasticity, hydration, collagen support for perimenopausal skin.
Vitamin C	Antioxidant. Supports collagen, brightens pigmentation, protects from UV damage.
Niacinamide	Barrier support, pore appearance, anti-inflammatory. Universally well tolerated.
Hyaluronic Acid	Humectant. Attracts and holds moisture. Supports plumpness and hydration.

HAIR GROWTH FOAM — COMPOUNDED

Ingredient	What It Does
Minoxidil	FDA-approved. Extends hair growth phase and increases follicular blood flow.
Finasteride (men)	5-alpha reductase inhibitor. Topical minimizes systemic exposure. Off-label topical use.
GHK-Cu	Stimulates follicular proliferation and scalp repair.
Latanoprost	Prostaglandin analog. Extends hair growth phase and increases density.
Ketoconazole	Anti-androgenic scalp antifungal. Synergistic with minoxidil.

Results typically begin with reduced shedding at 6–8 weeks, visible regrowth at 3–6 months. Daily consistent use required. Finasteride not for women pregnant or of childbearing potential.

READY WHEN YOU ARE

Next Steps

Every protocol at Viva Wellness Co. begins the same way: objective data, an honest conversation, and a plan that fits you. No generic protocols. No guessing. No pressure.

YOUR PRECISION HEALTH ASSESSMENT

- Comprehensive review of your medical history and current labs
- Discussion of your goals and performance priorities
- Evaluation of appropriate diagnostic panels
- Determination of an individualized protocol and membership tier
- Ongoing provider management, lab monitoring, and support

THE FINE PRINT

Important Disclosures

This eBook is for education only. It does not constitute medical advice, diagnosis, or a treatment plan. All therapies described require clinical consultation, health history review, lab evaluation, and explicit provider approval.

FDA Status. Semaglutide, tirzepatide, tadalafil, sildenafil, minoxidil, tretinoin, finasteride (oral), and Addyi are FDA-approved for specific indications. Tesamorelin is FDA-approved for HIV-associated lipodystrophy; other use is off-label. PT-141 (Vyleesi) is FDA-approved for premenopausal HSDD; other use is off-label. Retatrutide is investigational. BPC-157, TB-500, KPV, GHK-Cu, Epithalon, MOTS-c, Semax, Selank, and SLU-PP-332 are not FDA-approved for human therapeutic use.

Compounded medications are prepared by licensed compounding pharmacies and are not FDA-approved. They may be prescribed legally when a commercial equivalent is unavailable or when individualized formulation is clinically indicated. Off-label prescribing is a legal and common medical practice.

Results vary. Clinical trial outcomes reflect specific study populations and may not apply to every patient. Individual results depend on physiology, adherence, and lifestyle. No outcome is guaranteed.

Finasteride: Not for use by women who are pregnant or may become pregnant. Topical formulations carry the same warning. Teratogenic risk through skin contact.

Emergency: This guide is not a substitute for emergency care. In a medical emergency, call 911.
